A.1.1

Missing comma after **'functions'** in 'export functions signature'.

Missing comma after **'operations'** in 'export operations signature'.

A.4.6

In 'access assignment definition', for readability it would be better if it was on one line. The structure implied by the layout is not the actual structure. If too long to fit on one line then break before 'assignment definition'.

A.4.7

In 'mutex predicate', for readability it would be better if it was on one line. The structure implied by the layout is not the actual structure.

A.4.9

Missing comma before second **'numeric literal'** in 'trace repeat pattern'.

A.5.19

In 'is expression', for readability it would be better if it was on one line. The structure implied by the layout is not the actual structure.

A.5.21

Change definition of 'precondition expression' to

    precondition expression = '**pre_**', '(', expression list, ')';

A.7.2

Change definition of 'multiple assign statement' to (remove spurious '['/']' pair)

    multiple assign statement = '**atomic**', '(', assign statement, ';', assign statement,
                                              {';', assign statement}, ')';

B.2

Missing ')' in definition of 'character literal' after 'escape sequence'.
